How to plant a Down under Pot

Step 1
Stuff coco fiber (included) into the end of the pot that contains hanging wires (widest opening).

Step 2
Fill the other end of the pot with potting soil or substitute. You will want to fill it all the way to the top.

Step 3
Plant seedling, water, fertilize and allow to stand for two weeks or until roots take hold.

Step 4
Once the roots have taken, invert pot and hang by wire with plant facing downwards. Remove coco fiber and water and fertilize your plant as necessary.
