

General Ground Cover Spacing

Written by RSF

Monday, February 02, 2009 - 11:42 - Last revised Thursday, February 19, 2009

Spacing your ground covers

Groundcovers generally take 1½ growing seasons to fill in and completely establish themselves. Planting closer together can speed this to one growing season, while planting further apart can increase this to two growing seasons. Spacing is based on growth rate and the mature spread of the plants. The rate will vary somewhat depending on soil fertility, irrigation, climate, and maintenance practices

Inches between plants square foot	# of Plants per
3	16
4	9
5	5.75
6	4
7	2.93
8	2.25
9	1.78
10	1.44
12	1

Ageopodium - Snow in Summer 6-8" shade

Ajuga- 10-14"

Aremeria - Sea thirt 10-14"

Asarum - European Ginger 10-14"
